2d Platformer Engine Key Ability Power Ups package

This package allows you to give the player movement abilities as part of the level through power up objects. It includes the necessary scripts as well as some example prefabs to show how they work.

To make these scripts function properly, insert this code snippet into your PlayerMovement script at line 332 (Specific line does not matter *that* much for functionality, this is just where it is in my code):

```
#region POWERUP FUNCTIONS
public void ChangeJumpAmount(int amount) { amountOfJumps = amount; }

public void SetWallJumpPerm(bool canWallJump) { allowWallJump = canWallJump; }

public void SetDashMode(DashMethod dashMode) { dashMethod = dashMode; }

public void SetDashNum(int dashNum)
{
    amountOfDashes = dashNum;
    for (int i = 0; i < amountOfDashes; i++)
    {
      ResetDash();
    }
}
#endregion
```
